

GDP PER CAPITA, POPULATION GROWTH, AND MEAT CONSUMPTION PER CAPITA BY DIFFERENT COUNTRIES

DATA ANALYTICS COHORT 4 DDA4

AUGUST 20, 2021

By Omoniyi Macaulay

INTRODUCTION

DATA QUESTIONS

Is there any relationship between population growth and GDP per capita, in different countries?

Is there any relationship between meat consumption per capita and GDP per capita in different countries?

PROCESS

Data source

Food and Agriculture
Organization of the United
Nation,
World bank

Data collection

Researched and
downloaded csv files
from data source

Data storage

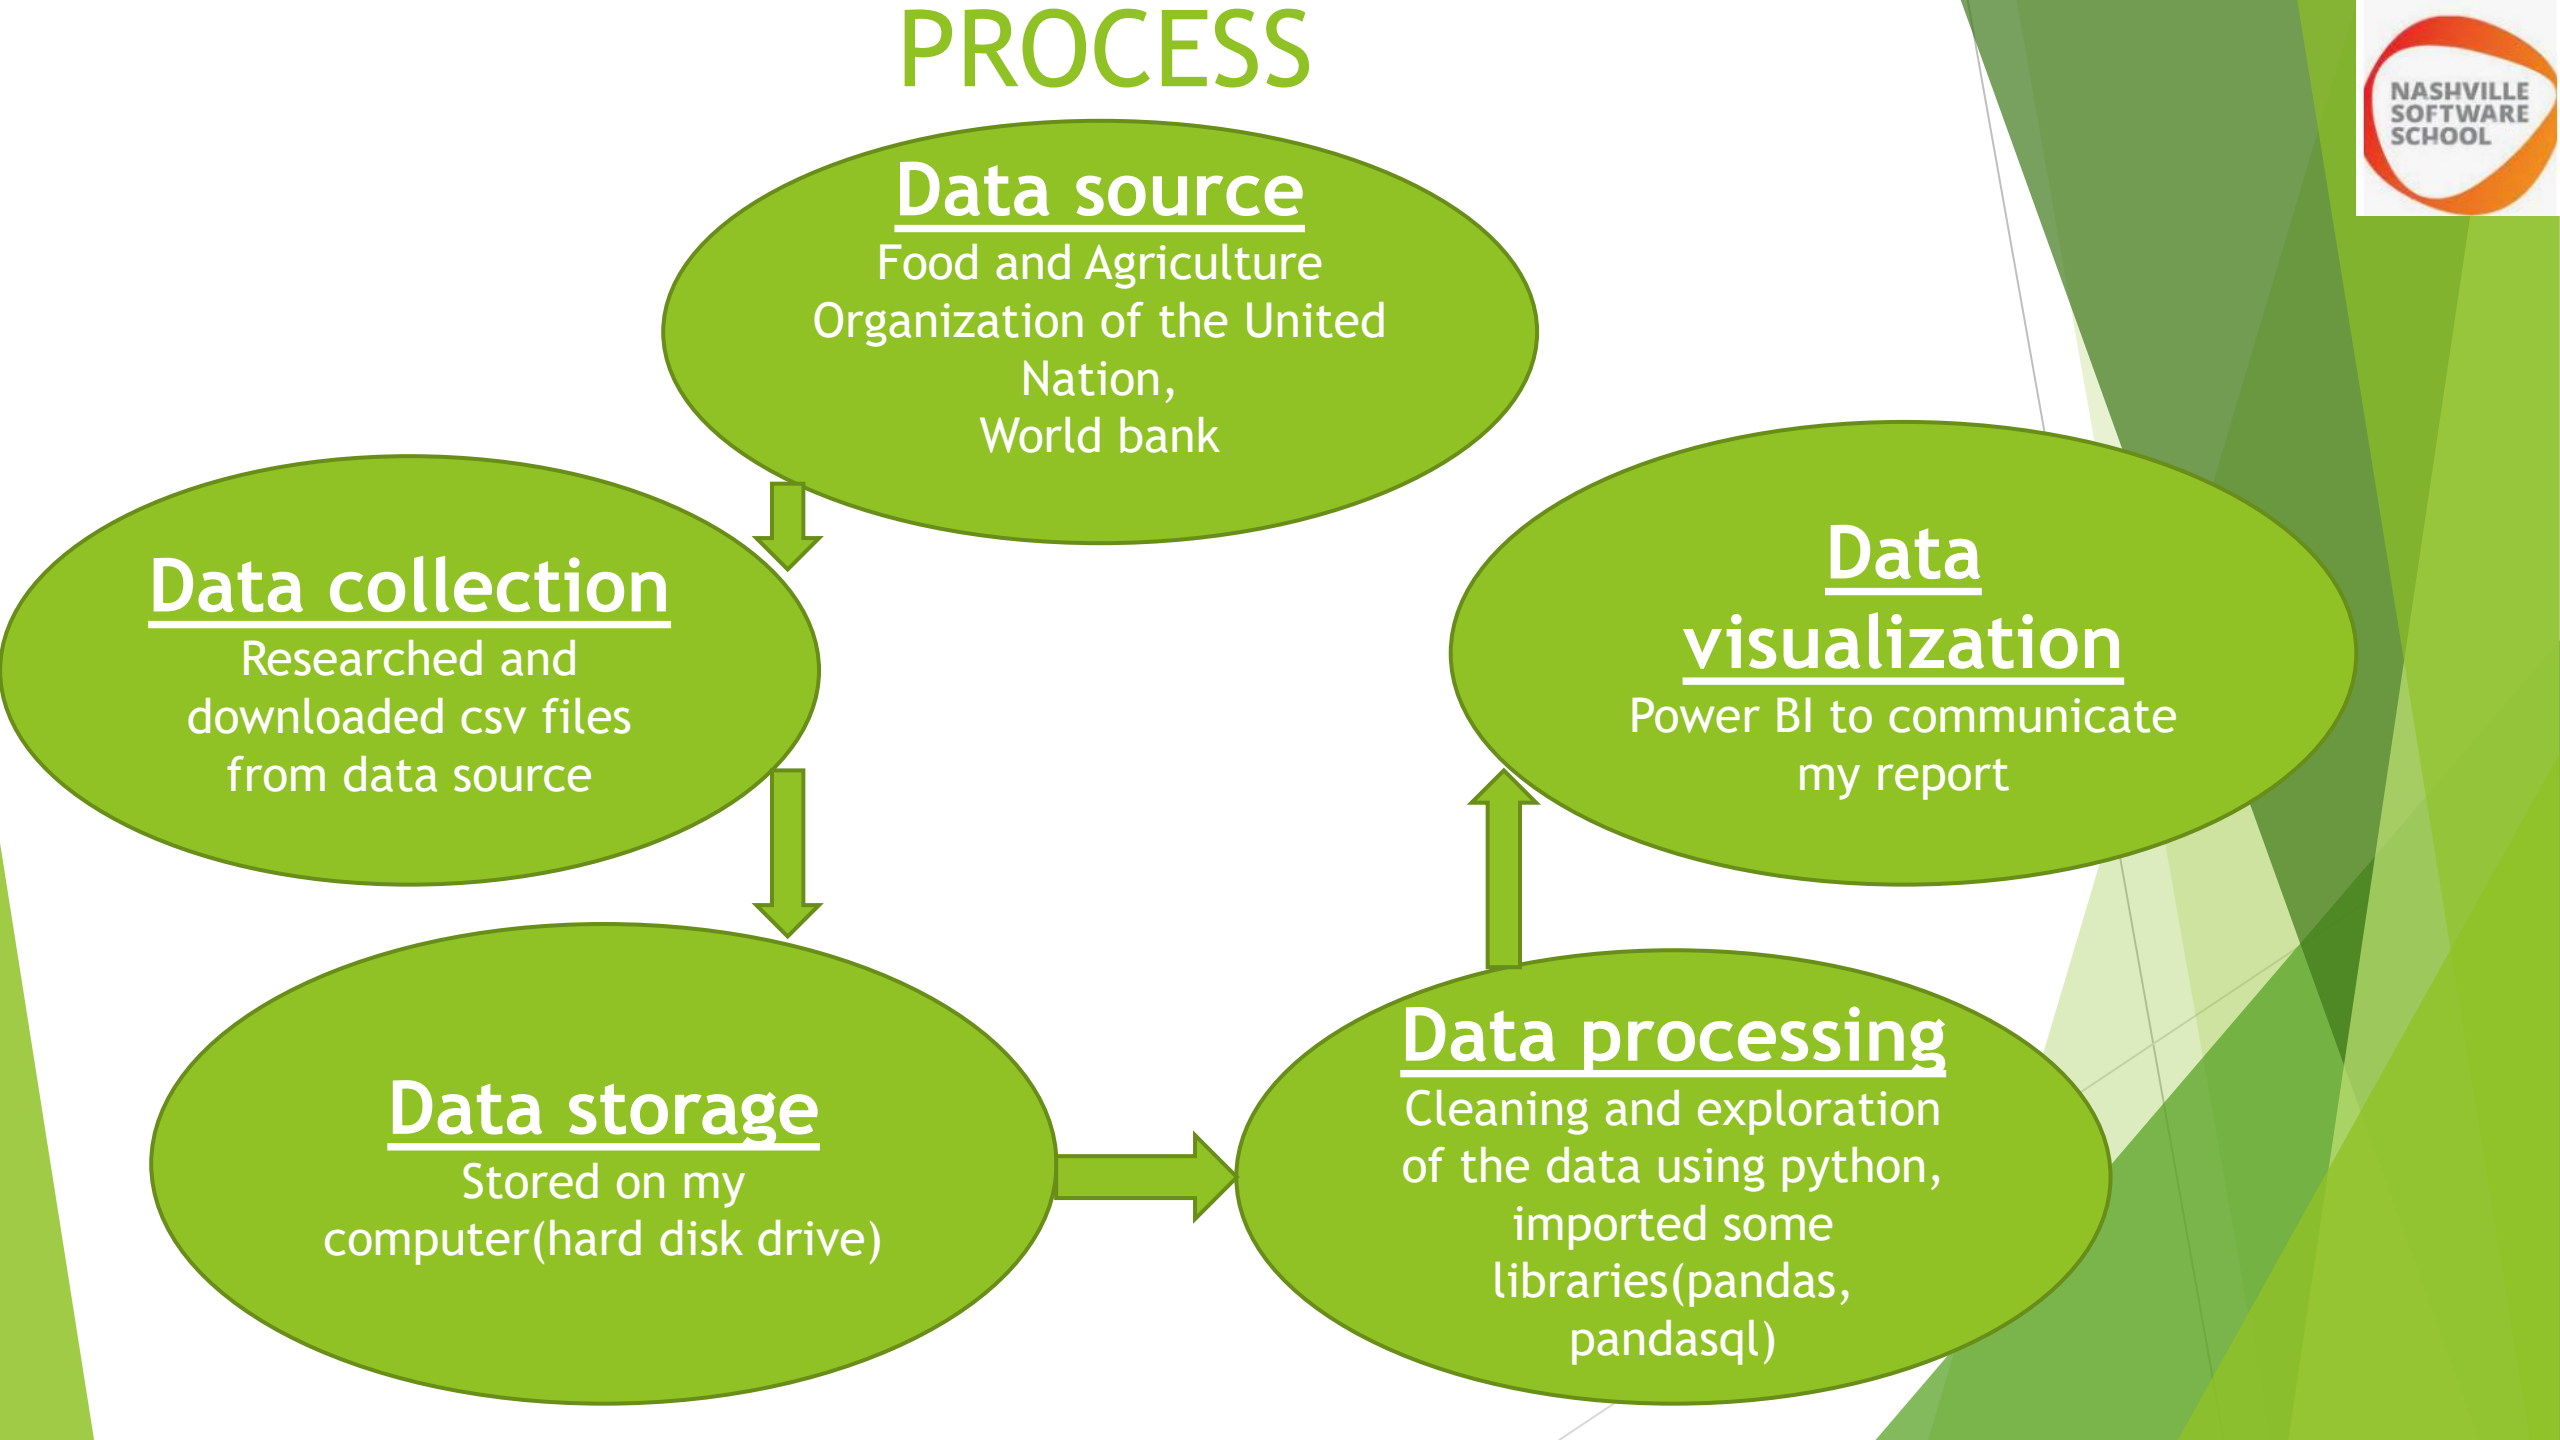

Stored on my
computer(hard disk drive)

Data processing

Cleaning and exploration
of the data using python,
imported some
libraries(pandas,
pandasql)

Data visualization

Power BI to communicate
my report

MEAT TYPE USED IN THIS PROJECT

PORK

BEEF

POULTRY

LAMB

MEAT MEASUREMENT IS IN (Kg per capita)

UNITED STATES GDP PER CAPITA AND MEAT CONSUMPTION PER CAPITA BY YEAR

CHINA GDP PER CAPITA AND MEAT CONSUMPTION PER CAPITA BY YEAR

FIGURE 1. There is a positive correlation of 0.29 between meat consumption per capita and GDP per capita in different countries

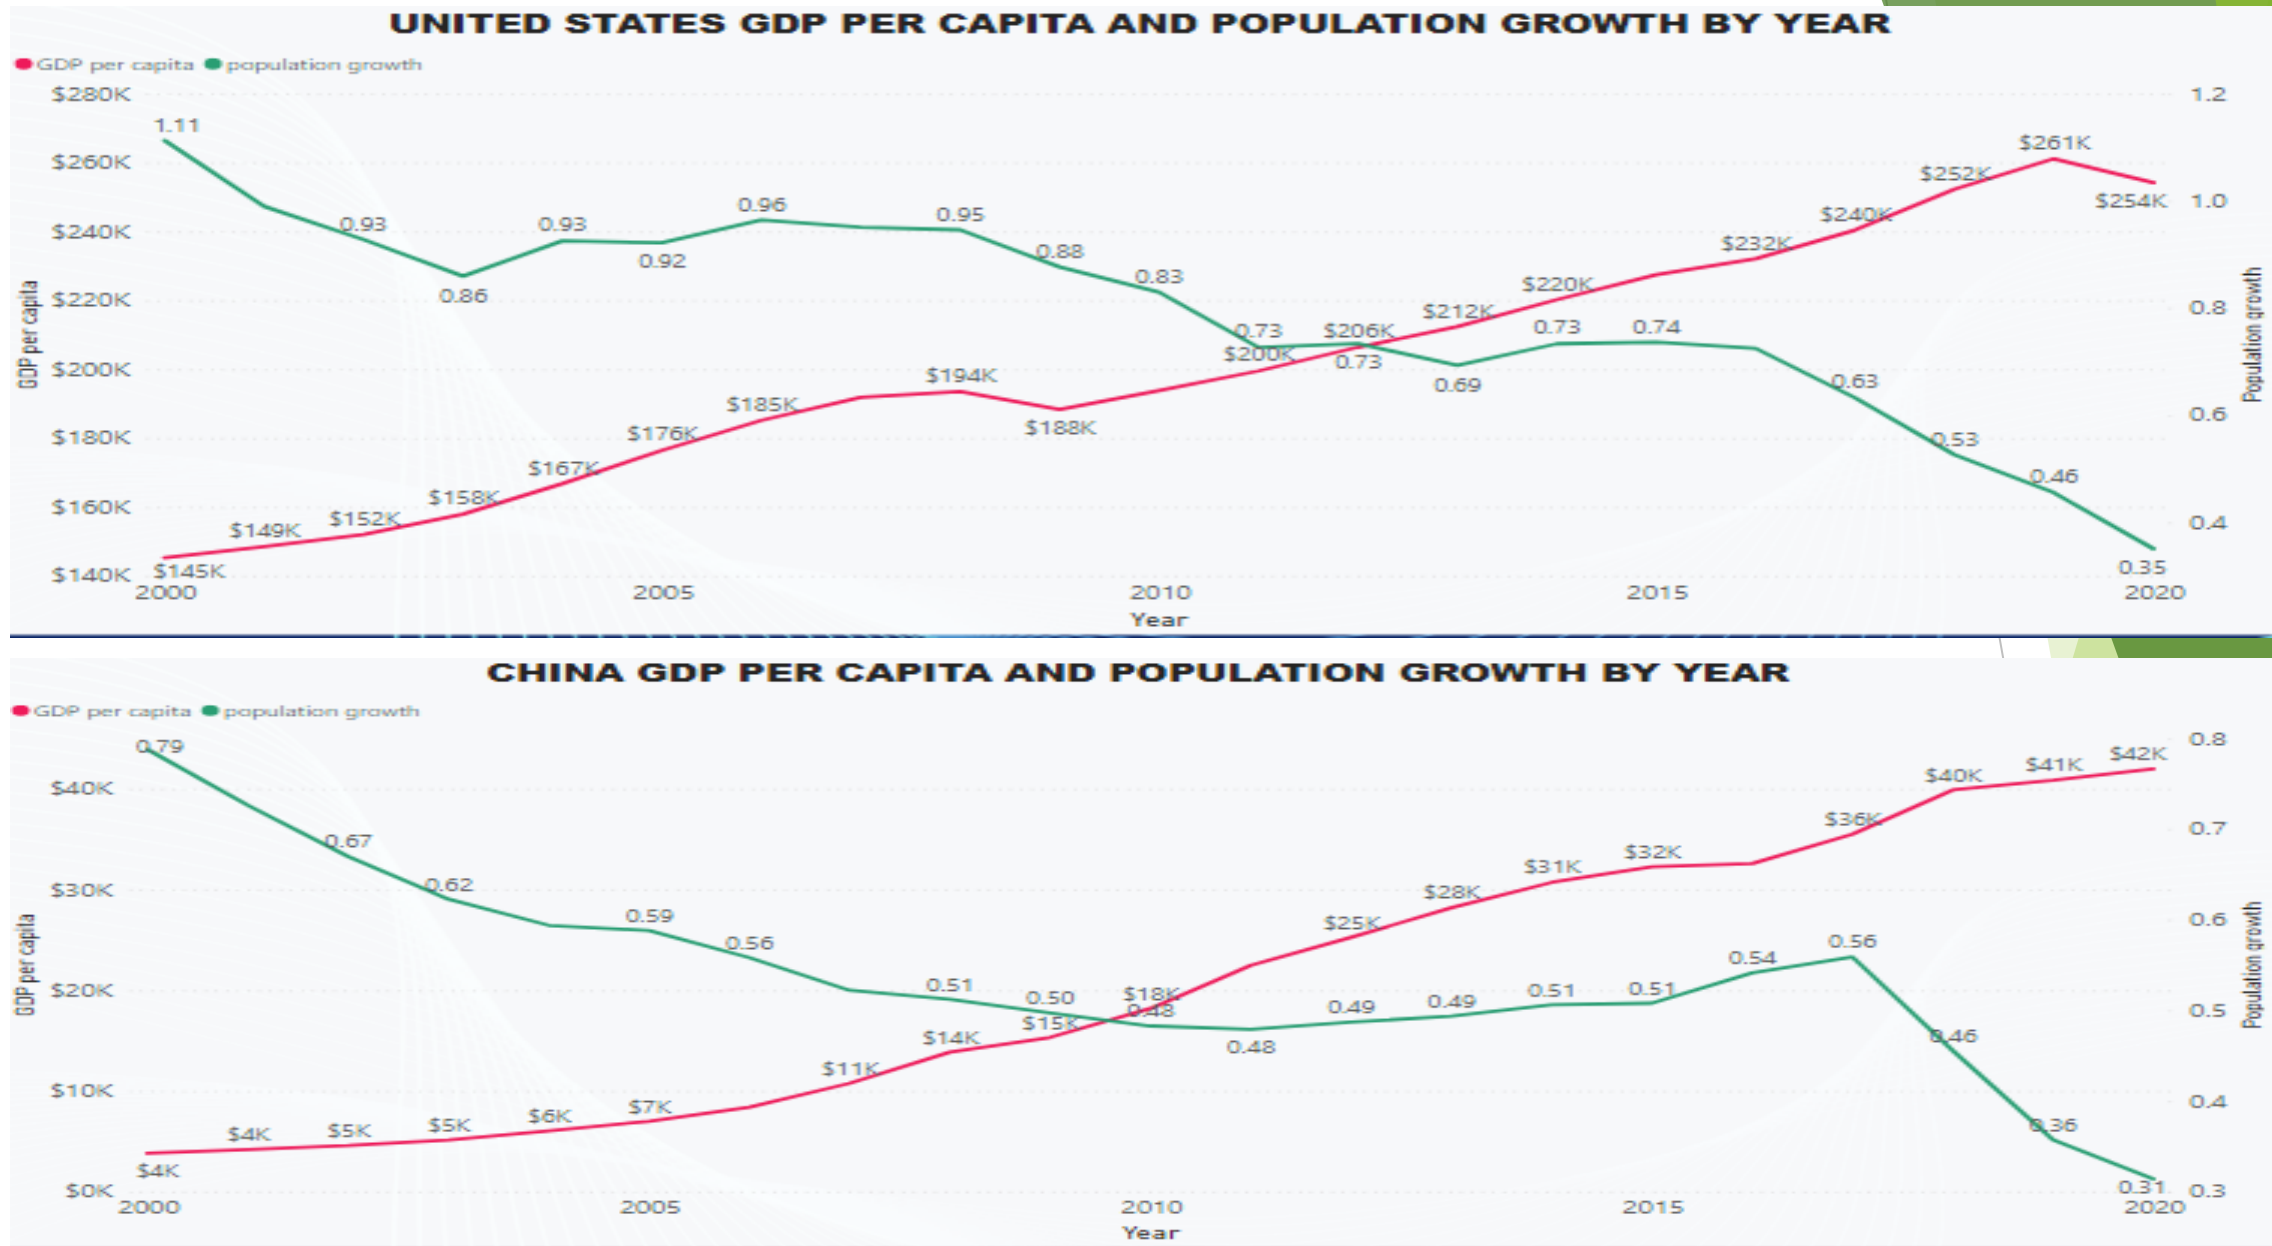

FIGURE 2 *There is a negative correlation of -0.19 between GDP per capita and population growth in different countries*

DASHBOARD

CONCLUSION

Result of my findings shows that there is a positive correlation of 0.29 between GDP per capita and Meat consumption per capita in different countries over time. As GDP per capita increases, meat consumption per capita increases.

Furthermore, there is a negative correlation of -0.19 between GDP per capita and population growth in different countries over time. As GDP per capita Increases, population growth decreases.
